DETAILED ACTION

In view of the appeal brief filed on Jan. 7, 2003, PROSECUTION IS HEREBY REOPENED. New grounds of rejection are set forth below.

To avoid abandonment of the application, appellant must exercise one of the following two options:

- (1) file a reply under 37 CFR 1.111 (if this Office action is non-final) or a reply under 37 CFR 1.113 (if this Office action is final); or,
- (2) request reinstatement of the appeal.

If reinstatement of the appeal is requested, such request must be accompanied by a supplemental appeal brief, but no new amendments, affidavits (37 CFR 1.130, 1.131 or 1.132) or other evidence are permitted. See 37 CFR 1.193(b)(2).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-30 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mathein. Mathein shows a circular cutter for paper. The cutter is held on to a handle by a clip. The unit appears to therefore be replaceable. From an analysis of the drawing the diameter to thickness ratio of the blade is clearly less than 15 and the blade angle is approximately 68 degrees. The drawing however may not necessarily be to scale but it is felt that the claimed ranges are at least close to those of the reference. Since there

appears to be little effective difference in the specifics of the reference and the claimed ranges such ranges would ^{have been} ~~be~~ obvious for one of ordinary skill in the art to specify.

Claims 1-12, 18-30 are rejected under 35 U.S.C. 103(a) as being unpatentable over Jahn. It is noted that the cutter of the device has approximately a 60 degree angle and the diameter to thickness ratio is considerably less than 15. The drawings are not to scale here either so the rationale supporting the rejection is the same as in the preceding rejection.

The earlier rejection based on Roberts has been withdrawn in view of appellant's remarks and a conference.
